DESCRIPTORS: *Films, *Ferromagnetic materials,
*Inductance, Coils, Oscillators, Magnetism, Magnetic
properties, Electrical conductance,

The dependence of the inductance of a coil with a mag-
netizable film on the premagnetization of the film is
calculated. An equivalent circuit is set up for the coil,
consisting of a dissipative parallel oscillating circuit
and an inductance connected in series. The values
(resonance frequency, quality, capacity, conductivity
and inductance) of the parallel oscillating circuit are
functions of the premagnetization. They are repre-

The thermal stability of commercial straight-run fuels
of kerosene type is mainly determined through charac-
ter and quantity of the non-hydrocarbon, resinous
compounds contained in them and representing the
basic source of high-temperature deposits. The hy-
drocarbon part of different commercial fuels has
practically an equal high temperature stability. The
dominant influence of non-hydrocarbon resinous com-
ponents on the thermal stability is observed also in
